

Brian Dacell Cabrera

DATA ANALYST | SOFTWARE DEVELOPER | AUTOMATION BUILDER

Moreno Valley, CA | (951) 269-8057 | BrianDacellCabrera@gmail.com | [BrianCabrera.io](https://briancabrera.io) | [LinkedIn](#) | [GitHub](#) | [itch.io](#)

PROFESSIONAL SUMMARY

Hybrid data analyst and software developer with a B.S. in Computer Science and experience across casino database operations, reporting, automation, full-stack web tools, geospatial applications, game development, and network support. Built recurring monthly segmentation and QA workflows spanning 100K+ player records, 500+ player/offer/campaign groups, and 50+ validation combinations. Strong in SQL, Python, VBA, JavaScript/TypeScript, React/Next.js, ArcGIS Maps SDK, C#/Unity, data quality, audit-system design, SOP development, and translating business rules into repeatable systems.

CORE TECHNICAL SKILLS

Data & Analytics: SQL, SQL Server, PostgreSQL, MySQL, Excel, VBA, Crystal Reports, Pandas, NumPy, Tableau, Power BI, Jupyter, data cleaning, segmentation, KPI reporting	Programming: Python, JavaScript, TypeScript, C#, C++, Java, Bash, HTML, CSS, R, Ruby
Web & APIs: React, Next.js, Angular, Node.js, Express.js, Django, REST APIs, Supabase, responsive UI, Vercel	Engineering Practices: Git, GitHub Actions, CI/CD, Agile/Scrum, TDD, UAT, SOPs, QA standards, runbooks, rollback planning, secure coding
Data Engineering: ETL pipelines, data modeling, staging tables, idempotent upserts, stored procedures, materialized views, API integration	Statistics: Descriptive/inferential statistics, A/B testing, regression, hypothesis testing, forecasting, validation
Game Development: Unity, Unreal Engine, GameAnalytics, NavMeshAgent, finite state machines, profiling, UI/UX, telemetry	Infrastructure: Aruba switches, Python/Bash automation, health counters, inventory, network troubleshooting, audit logs
Geospatial: ArcGIS Maps SDK for JavaScript, SceneView, 3D terrain, geocoding, elevation sampling, geofencing, browser geolocation, Haversine distance	Spatial Application Design: basemap controls, point selection, GPS accuracy handling, consent-based tracking, event logs, CSV snapshot export, runtime-only SDK loading

PROFESSIONAL EXPERIENCE

Soboba Casino Resort

Database Analyst

November 2024 - June 2026

San Jacinto, CA

- Owned recurring monthly segmentation, offer assignment, reporting, and QA workflows across 100K+ player records, 500+ player/offer/campaign groups, and 50+ validation combinations using MySQL, Excel, VBA, Python, Crystal Reports, Oasis, Everi, Optx, and Experiture.
- Built Python and VBA automation that produced campaign-ready exports together with audit packages containing reconciliation reports, record counts, duplicate checks, exception lists, and validation results for IDs, eligibility rules, offer values, and campaign windows.
- Established audit and QA controls for workflows that previously lacked standardized safeguards; authored SOPs, validation standards, runbooks, field mappings, rollback steps, and cross-team handoff procedures so work could be reviewed and repeated consistently.
- Designed and tested new campaign, kiosk, and data-processing workflows where established systems or documentation did not exist, using controlled test cases, UAT, audit logs, production checks, and safer rerun procedures.
- Modified HTML and JavaScript templates used by Everi/Trilogy kiosks and receipt flows, connecting presentation logic to MySQL views and stored procedures to render dynamic barcodes, disclaimers, prize-expiration language, and player eligibility.
- Built integrations and internal web tools to move player and offer data between CRM, kiosks, mobile app, email, direct mail, and campaign systems using MySQL, HTML/JavaScript, REST/CSV payloads, staging tables, and repeatable import/export processes.
- Improved database integrity by approximately 15% and campaign efficiency/engagement by approximately 20% through tighter segmentation, validation, auditability, and fulfillment logic.

Trashfire Games

Software Programmer

May 2024 - May 2025

Remote

- Integrated gameplay and performance telemetry in Unity with C# and GameAnalytics, including session, level, reward, performance, and error events with consent-aware handling.
- Used Unity Profiler, Timeline, and Memory Profiler to reduce GC spikes through pooling and draw-call batching, contributing to approximately 30% fewer bugs and roughly 20% better frame time on target scenes.
- Built a PostgreSQL ingestion and analytics workflow with SQL queries and materialized views for D1/D7 retention, session length, feature adoption, crash-free sessions, funnels, and drop-off analysis.
- Built an internal Angular dashboard for funnels, crash signatures, and cohorts with role-based access and an audit trail.
- Managed Git LFS, branch protection, PR templates, CI checks, and tagged releases for a 40+ person Agile team using GitHub Actions before nightlies and releases.
- Implemented enemy AI with finite state machines, NavMeshAgent navigation, off-mesh links, field-of-view/line-of-sight checks, and pooled spawners; also used feature flags and remote configuration for controlled rollouts and A/B tests.

ADDITIONAL EXPERIENCE

Advanced Solutions Team

March 2024 - May 2024

Network Assistant

Moreno Valley, CA

- Automated inventory and routine switch checks with Python and Bash, stored scripts in Git, upgraded/configured Aruba switches, and validated changes with logs and health counters.
- Produced dashboards for link utilization and error rates and documented change notes, validation evidence, and rollback steps for consistent handoffs.

Private STEM Tutoring

December 2022 - January 2024

Computer Science Tutor

New Haven, CT / Remote

- Taught Python, C++, Java, SQL, data analysis, and project-based problem solving to high school and undergraduate students.
- Set up GitHub repositories, branching, pull-request reviews, and GitHub Actions for tests/linters; built SQL-backed CRUD and REST examples with SQLite or PostgreSQL.
- Emphasized secure coding, input validation, parameterized queries, basic threat modeling, reproducible setup, and rubric-based progress reports.

Aeternum Trading Co.

September 2021 - July 2022

Founder / Lead Data Analyst

Remote

- Built and maintained a multi-user financial operations platform in Google Sheets and Google Apps Script for real-time payroll, expenses, revenue, scheduling, and member activity across 200+ team members.
- Engineered ETL-style automations, anomaly checks, forecasting models, and KPI dashboards to support pricing, demand, payroll, and operational decisions in a competitive virtual economy.
- Coordinated global operations across time zones with zero operational downtime and used dashboards to manage task load, performance, and financial controls.
- Led strategic planning, trend analysis, and process improvements that supported operations across two servers and service to 4,000+ customers.
- Applied role-based access, audit logs, versioned utilities, tagged releases, READMEs, and repeatable procedures to improve reliability and accountability.

SELECTED TECHNICAL PROJECTS

BrianCabrera.io - Full-Stack Portfolio Platform | Next.js, TypeScript, React,

2026

Tailwind, Supabase, ArcGIS, Vercel

- Designed and deployed a responsive portfolio platform featuring professional case studies, analytics tools, geospatial applications, browser games, security demonstrations, travel-planning utilities, and interactive web experiences.
- Built Data Lab features for CSV import, data-quality review, distributions, correlations, scoring models, chart generation, export workflows, and plain-English interpretation of results.
- Developed Geo Lab with the ArcGIS Maps SDK for JavaScript and SceneView, including satellite, topographic, and 3D street basemaps, world elevation, address geocoding, elevation sampling, direct point selection, and CSV snapshot exports.
- Added consent-based one-time and live browser geolocation, adjustable geofences, Haversine distance calculations, GPS accuracy handling near boundary edges, and status-change event logging.
- Implemented user-activated CDN loading for ArcGIS JavaScript, CSS, services, and 3D scene creation so GIS assets remain outside the initial page load and main Next.js bundle.
- Built Security Lab demos covering password evaluation, protected-route concepts, secret scanning/redaction, least-privilege roles, and security-focused user guidance.
- Implemented a Supabase account system with registration, email confirmation, profiles, protected routes, Row Level Security, and account-specific data persistence.

An Eternity Gone By | Unity, C#, Steam, Team Production

Released

- Contributed gameplay programming, technical debugging, optimization, telemetry, source-control workflows, and production support to a Steam-published team project at Trashfire Games.
- Worked across design, programming, QA, analytics, and release processes in a large multidisciplinary development team.

AstralBlade | Game Development, UI, Level Design, Audio

January 2024 - February 2024

- Extended existing ChromaThoth systems to improve gameplay mechanics and collaborated on interface refinements, level-design changes, and player-facing polish.
- Remixed and adjusted audio assets to better match theme, pacing, and atmosphere while responding to feedback and gameplay observations.

SELECTED TECHNICAL PROJECTS (CONTINUED)

ChromaThoth | Unreal Engine, C++, UI Systems, 3D Assets

August 2023 - September 2023

- Diagnosed critical code and presentation issues shortly before delivery, rebuilt affected workflows, and helped the project launch on schedule.
- Developed the user interface and menu system in Unreal Engine with C++ within a one-week production window, including configurable audio settings and mode switching.
- Created reusable 3D assets and textures that reduced storage by approximately 7% and improved rendering performance by approximately 12%.

Marion | Unity, C#, Python, Agile Project Leadership

January 2022 - June 2022

- Led a team of eight developing a role-playing game, managed in-house assets and coding, and applied Agile practices to deliver approximately 40% under budget and three weeks ahead of schedule.
- Used player-behavior analytics to identify gameplay bottlenecks and inform tuning; contributed C# and Python work, cloud-save functionality, and optimizations that reduced game size by approximately 14%.

EDUCATION & HONORS

California State University, San Bernardino

December 2023

B.S. in Computer Science | GPA: 3.3

San Bernardino, CA

- CNS Edison Scholarship Recipient
- Dean's List - 2022, 2023

ADDITIONAL TOOLS & INTERESTS

Databases: PostgreSQL, MySQL, MongoDB, SQLite, NoSQL concepts, SQL Server, data modeling, ETL pipelines, stored procedures, API integration.

Analytics & Visualization: Pandas, NumPy, Excel, Google Sheets, Crystal Reports, Tableau, Power BI, Looker (familiar), Jupyter Notebooks, ArcGIS, geospatial analysis, descriptive/inferential statistics, regression, hypothesis testing, forecasting, A/B testing.

Software & Frameworks: React, Next.js, Angular, Node.js, Express.js, Django, ArcGIS Maps SDK for JavaScript, SceneView, Unity, Unreal Engine, Git/GitHub, GitHub Actions, REST APIs, Agile/Scrum, CI/CD, TDD, UI/UX principles, cybersecurity fundamentals.
